Polymer Plate For Hot Foil Stamping

Stamping commonly used etching, zinc plate, silicone version. However, such a sheet production process due to the light-sensitive adhesive coating, so much trouble, some want to use the stamping machine to conduct business overseas users, it is very complicated.

Now, you can use bronzing resin board, which is actually a version of resin with a common high-temperature materials with improved form. For the general store business gilt, gilt resin plate has obvious advantages: rapid plate, do not pollute the environment, light weight.

Of course, the resin version of the pressure of the poor, is not suitable for all materials. It can not replace the copper plate, zinc plate, silicone rubber sheet.
