The Advantage of Hydraulic Pressure Hot Foil Stamping Machine

Packaging industry, Die cutting, Embossing, high precision stamping, Decorative painting wood products branded paste painting process requires a lot of pressure. Usually the pressure of the pneumatic Hot Stamping Machine is difficult to more than 15 tons, more than 15 tons stamping pressure hydraulic drive could be considered.

Pneumatic bronzing machine to pass the gas pressure as a medium, there are a lot of uncertainty, because there is more room for the gas molecules, can easily be compressed, so the pressure delivered to the product surface, there would be a process of change. The distance between the liquid molecules is much smaller than gas molecules, once the pressure delivered to the product surface, the pressure will remain for a long time stability.

Hydraulic drive, the machine itself to be equipped with a complete hydraulic system, compared to the pneumatic Hot Stamping Machine, the structure is more complex, some of which will be expensive.
